

In-Home Aides-Partners in Caring

October 2013

WHAT YOU WILL LEARN:

- A description of Alzheimer's Disease
- Symptoms of Alzheimer's Disease
- Changes in a person's day to day functioning with Alzheimer's Disease
- The Aide's role in working with a client with Alzheimer's disease

- ◆ Alzheimer's disease is the most common type of dementia and is a devastating condition that results in the loss of memory and other cognitive abilities, and in the ability to care for oneself independently.
- ◆ Difficulty remembering names and recent events is often an early clinical symptom; lack of interest and depression are also often an early symptom of Alzheimer's disease.
- ◆ Later symptoms include problems with judgment, disorientation, confusion, behavior changes, and difficulty speaking, swallowing, and walking.
- ◆ There is no "typical" client with Alzheimer's disease. Symptoms and behaviors vary. As the disease progresses through various stages, the client loses more and more control over the ability to function mentally and physically.

Facts about Alzheimer's Disease:

- ◆ Millions of Americans now have Alzheimer's disease or another dementia- dementia isn't a specific disease. Instead, dementia describes a group of symptoms affecting intellectual and social abilities severely enough to interfere with daily functioning. **Many causes of dementia symptoms exist. Alzheimer's disease is the most common cause of a progressive dementia**
- ◆ More women than men have dementia
- ◆ There is not a known cause for Alzheimer's
- ◆ Physical changes take place in the brain- plaques and tangles form in the brain
- ◆ Brain cells which send messages to each other - called "neurons" can not relay the messages as well due to the plaques and tangles

Risk Factors of Alzheimer's:

- ◆ Family history of Alzheimer's
- ◆ Over 65
- ◆ History of serious head injury

Four Quick Alzheimer's Facts

1. Due to memory problems associated with Alzheimer's-people with Alzheimer's will have problems with social skills (conversation, memory)
2. Alzheimer's disease damages the part of the brain that controls orientation, so people get lost
3. The *emotional* center of a person with Alzheimer's gets damaged
4. The part of the brain that regulates appetite also gets damaged

Alzheimer's signs and symptoms:

- ◆ Forget familiar things such as people's names, phone numbers, what month it is (As people age, it's normal to have occasional memory problems, such as forgetting the name of a person you've recently met. However, Alzheimer's is more than occasional memory loss. It's a disease that causes brain cells to malfunction and ultimately die. When this happens, an individual may forget the name of a longtime friend or what roads to take to return to a home they've lived in for decades)
- ◆ Lose interest in favorite activities
- ◆ Feel more suspicious
- ◆ Feel stressed when making decisions

With Alzheimer's one's sense of self is often lost- there must be a give and take in providing care to the client with Alzheimer's.

What are ways the In-Home Aide can provide care?

- ◆ Remember - providing care for a person with Alzheimer's disease isn't easy
- ◆ Respect small choices- does the client have a favorite robe, shampoo, soap, etc.
- ◆ Keep it simple- one thing at a time rather than multiple items at one time- rapid fire sort of requests can be confusing and frustrating for a person with Alzheimer's. Repeat instructions as often as needed. Do not change topics suddenly.
- ◆ Find good reasons- maybe give a good reason for taking a bath such as getting clean for company to come, etc.
- ◆ Slow it Down- engage the client in the task as this may reduce agitation, resistance and combative behavior
- ◆ Don't overload tasks- if you feel like you need more time or you notice the tasks are overwhelming for the client on the plan of care, talk with your supervisor about your observations for possible changes that may be needed
- ◆ Be aware of the client wandering - particularly in late afternoon and evening
- ◆ Maintain a safe environment- lock doors to unsafe areas, keep doors to outside locked (per care plan instructions).

More on the In-Home Aide's Role:

- Let your supervisor know if the client appears to be having problems with keeping up with their finances
- Write reminders on the calendar for the client
- Ask your supervisor if the client would benefit from the use of a medicine planner
- Keep a list of important phone #s near the phone
- Ask your supervisor if putting pictures or labels on drawers or cabinets would help the client identify contents
- Encourage the client to have a set routine
- Have the client write down things they need to remember
- Encourage the client to use lists
- Suggest having a designated place for important objects such as the keys, glasses, remote etc.
- Ask your supervisor if the client's caregiver would benefit from joining a support group

Partners in Caring**

Moderate or Mid Stage Alzheimer's

- ◆ Needs help with ADLs
- ◆ Needs reminders to eat
- ◆ Changes in sleep habits
- ◆ Restlessness or wandering
- ◆ Getting angry, suspicious, or easily upset
- ◆ Trouble recognizing family members
- ◆ Difficulty expressing self and understanding others

Maintaining Good Nutrition:

Provide extra time for eating

Encourage self-feeding; provide finger foods that the client can handle easily.

Offer foods that are high in protein and complex carbohydrates (fruits, whole grains, and vegetables) for between meal snacks, as indicated on the plan of care

Give reminders on how to use utensils if needed

Remind the client to chew food slowly

Serve foods and liquids that are not too hot or too cold to avoid burns

Observe, Record & Report:

- ❖ **Changes in confusion or wandering**
- ❖ **Changes in ability to perform ADL's and to communicate**
- ❖ **Signs of infection**
- ❖ **Refusal to take medication**

For the person with Alzheimer's, activities structure the time. Activities also can enhance a person's sense of dignity and self-esteem by giving purpose and meaning to his or her life. Planning activities should focus on the:

- **Person** - Keep the person's skills and abilities in mind. Be aware of physical problems. Pay special attention to what the person enjoys
 - **Activity** - Well-planned activities can improve the quality of life of those with dementia. Encourage involvement in daily life
 - **Approach** - Offer support and supervision. Be flexible and patient
 - **Place** - Make activities safe. Minimize distractions that can frighten or confuse the person
- ❖ **A planned day allows you to spend less time and energy trying to figure out what to do from moment to moment.**

Think about this:

- ◆ People with Alzheimer's can only do one thing at a time.
- ◆ People with Alzheimer's have repetitive behaviors.
- ◆ Be sure to keep this in mind while caring for the Alzheimer's client- keep the tasks to one at a time, don't try to do more than one thing at the time for the client.
- ◆ If you notice the client becoming upset with an activity that may need to be changed, notify the supervisor to evaluate the plan of care for any changes needed.
- ◆ **If your client seems agitated, they may have pain that they cannot express, notify your supervisor if your client seems agitated.**

When approaching a person with dementia-

- ✓ **Knock- announce yourself**
- ✓ **Greet and smile**
- ✓ **Move slowly- hand offered in handshake position**
- ✓ **Move from the front to the side**
- ✓ **Greet with a handshake and your name**
- ✓ **Slide into hand under hand hold**
- ✓ **Get to the person's level**
- ✓ **Be friendly- make a "nice" comment or smile**
- ✓ **Give your message- simple, short and friendly**

October 2013 Aide Newsletter- Alzheimer's POST TEST

Name _____ Date _____

1. Alzheimer's disease is the most common type of dementia- (check true or false)
True False
2. More women than men have dementia- (check true or false)
True False
3. Signs and symptoms of Alzheimer's include: (check the correct answers)
 - a. Forget familiar things such as people's names, phone number, etc.
 - b. Lost interest in favorite activities
 - c. Feel more suspicious
 - d. Are able to make decisions easily
 - e. All of the above
4. Difficulty expressing self and understanding others could be a sign of Moderate or Mid Stage Alzheimer's- (check true or false)
True False
5. Check the best answer regarding approaching a person with dementia: (check all that apply):
 - a. Knock and announce yourself
 - b. Greet and Smile
 - c. Move slowly, hand offered in handshake position
 - d. Get to the person's level
 - e. Be friendly- make a "nice" comment or smile
 - f. Tell the client everything he/she needs to do all at once
 - g. a, b, c, d, e
 - h. All of the above
6. The behaviors of a person with Alzheimer's are tied to changes in the brain- (check true or false)
True False
7. Sometimes a client's pain can be expressed as the client being agitated- (check true or false)
True False
8. The Aide's Role in assisting a client with Alzheimer's may include (check the correct answer):
 - a. Write reminders on the calendar
 - b. Keep a list of phone numbers near the phone
 - c. Have the client write down things they need to remember
 - d. minimize distractions that can frighten or confuse the person
 - e. all of the above
9. A person with Alzheimer's disease would not have any problems with judgment (check true or false)
True False
10. Some basic things you can do to help a person with Alzheimer's include: (check the best answer)
 - a. Respect small choices
 - b. Limit choices- keep it simple
 - c. Stick to a routine
 - d. Slow down and don't overload tasks
 - e. All of the above
